

N2G SAFESIDE

DELTA BREEZE

The Delta Breeze is a modern electric active disinfection device. Because it uses four state-of-the-art technologies at the same time, it disinfects both the surfaces and the air of your space.

Unlike passive disinfection devices (with filters), Delta Breeze does not filter the air but actively detects and neutralizes pathogens that are found, growing or invading your home or business.

Constantly disinfects the air from viruses, allergens, dust, pollen, airborne particles, cigarette smoke, air pollution, odors. It constantly disinfects surfaces (floors, walls, ceilings, carpets, furniture, etc.) from viruses, fungi, bacteria, protozoa, hairs, germs, mites, volatile compounds, mold and any pathogenic dangerous microorganism. It has been shown that photocatalytic oxidation, known worldwide as NCC – Natural Catalytic Conversion (ActivePure © technology), reduces dangerous pathogens by more than 99% in less than 24 hours.

Characteristics

Size	9" Width, 12" height & 12" deep
Weight	3.8kg
Coverage	250ft2 to 3000ft2 (23m2 to 279m2) *
Input	100-240VAC 50/60Hz 2A
PCO Cell	Normal Mode Output: < 0.02 ppm ozone (ambient room concentration)
Purification Plate	High Mode Output: < 0.05 ppm ozone (ambient room concentration)
Ionization	24 to 30 KV, 20-30 Khz Ion Generation Pulsator 6 KV DC Needle Ion Generator
